

Printing within Remote Solutions

Remote Solutions uses a third party application to efficiently provide printing functions. A client application needs to be installed on each computer you access Remote Solutions with.

To download the application please open a web browser and go to <http://www.churchmanagementsolutions.com/support>. On the left side you should see a Menu called Remote Solutions Universal Print Client. Click on the appropriate download for your operating system. Use this file to install Uniprint on your local PC/Mac. Install directions are also included in this location.

When logging into Remote Solutions from a PC you should see the UniPrint client start within the system tray of your computer. If you do not see the icon then you will need to manually start the UniPrint application. Start > Programs > UniPrint Client > Launch UNIPrint Client

On a Mac you will need to start the UniPrint application before connecting to Remote Solutions.

When it is time for you to print from with Remote Solutions use the printer called UniPrint. This will take your print job to the local UniPrint client for you to select your local printer.
